q: Well, does anyone know which file contains the dirt on the windshield? I'd like to edit it a bit.

a: OK I think I found out that it is the glass.mip in the cup.dat

q: The problem: Everytime I edit the glass.mip file I get some strange textures on my windshield.

a: Set mapping in you glass.mip to "0" so it can be tiled

q: I have a small problem with winmip. When I try to convert a bmp into a mip it says to me the height or width of the picture is not a power of 2. That's something I don't understand. The size of the picture is 600x600, but I don't think there is any connection to that.

a: Power of 2 = 2, 4, 8, 16, 32, 64, 128, 256, 512, 1024, 2048, etc.
Only these sizes allowed for mips.

q: I converted a bmp to a mip, and the image was white

a: Also, check that the Sub-Im value is correct for the size of image.
For an image with the following resolutions, the Sub-Im value is given..

Res.....Sub-Im

2.....1

4.....2

8.....3

16.....4

32.....5

64.....6

128....7
256....8
512....9
1024..10
2048..11

q: how the heck do you get BMP's converted to STP files for tracklogo, maps etc..

a: Open your bmp, select stp in the pulldown menu, select the miptype to choose the color depth, save the file and your done.

thanks Klaus, Indy & tinitoon
